

Describe a risk you took that you thought would lead to a terrible result but ended up with a positive result[new]

changed my major

a year ago, facing this decision, I really wanted to change my major,

reason: previous electronic and information engineering

1. Complex calculations and theories
2. Abstract that I had no chance to practice

However, a risk, because gave up what I learned and adjusted to a new field, which seemed to be impossible

After communications with my mother, made up my mind and changed

Why positive:

1. Write a program to calculate
2. Enjoy learning
3. Promising field

Any way...

I would like to talk a time when I changed my major.

It was a year ago that I was facing this tough decision, I really wanted to change my major.

because my previous major was Electronic and Information Engineering, which I thought was difficult to learn.

For the reason that there were many complex calculations and theories in this major,

and it was very abstract, which I couldn't practice by myself.

However, it would be a huge risk for me because I had to give up most of the knowledge I have learned, and tried to adjust to a new field, which seemed impossible.

After careful consideration and much discussion with my mother, I finally made up my mind to change my major into Artificial intelligence.

The reason why I think I have a positive result is that

firstly, I can calculate by writing a program, which is convenient

in addition, I enjoy learning about how AI can solve real-world problems and improve our life, for example, after one year's study, I am able to write a program to train my laptop and enable it to classify different kinds of pictures.

finally, what delights me the most is that AI is a promising field, which will help me find a decent job in the future.

Anyway, it is because of those benefits that I feel glad to have made this change.
